GROUP PROJECT 1

Develop insightful problems that can be used a as a specification so that it may be given to any developer to create queries to resolve to provide resolution to the problem.
Also, it teaches the group how to investigate a new database system as if the business just acquired a new business. The IT department will be required to learn this new system for maintenance and enhancement purposes.

Learning how to work as a team and the concept that the team is more important than any individual. Exposure to working in a delegation model.

This assignment will leverage your understanding of Chapters 1,2, 3 and 6 as the basis for creating the queries

Contents

Project Tracking techniques documentation using Excel and Word

1. Provide meeting notes (word document) with an agenda and attendance
2. Develop a to-do list for the team members using the To-do list. Each project in the worksheet will be the name of the group member and their responsibilities for the project and due dates.

To-do list for projects

3. Use Gantt Project planner to track the summarized progress of the project. It will be managed by the project manager and shared with the group team[1]. The activity will be the individual tasks for each group member. Devise your own convention

Gantt project planner

Each member of the group will develop 30 problem statements (propositions) and develop the solution.

At a minimum, there should be one queries from each of the 5 different databases below:

```
1. use AdventureWorks2014;
2. use AdventureWorksDW2014;
3. use TSQLV4;
4. use WideWorldImporters;
```

___

[1] See attached "Group Number – Gantt project 1 planner.xlsx"

```
5.   use WideWorldImportersDW;
```

Problems should range from simple (5) to medium (15) to complex (10)

All queries must use the ANSI 92 standard for queries with the type safe "on".

1. Simple query should have up to 2 tables joined.
2. Medium query should have from 2 to 3 tables joined and use built-in SQL functions and group by summarization
3. Complex query should have from 3 or more tables joined, custom scalar function and use built-in SQL functions and group by summarization

Group presentation

Identify the project leader for the group
Who is the designated project leader for delegating work?

Create PowerPoint Presentation which is voice annotated
The presentation should:

1. Identify the work of each of the individual members.
2. Review the problems by simple, medium and complex
    a. Prioritize the Top problem by each member and why the team made the decision for the rating.
    b. Prioritize the worst problem by each member and why the team made the decision for the rating. How can the problem can be fixed to make it better?
3. If any of the members of the group do not participate, please notify me during the project period.
4. Please keep this under 25 minutes.

The submission should include the following:
1. Create a VHDX file as a submission format with a directory structure. Zip files or RAR files will not be accepted.
2. Submit all of the project tracking techniques documentation
3. The individual group members problems should be submitted with the file name Group -Member Name using the template word document. **The query should be the code not a screenshot**.
4. Create a SQL file Group Number -Your Member Name.SQL with the problem statement and all 30 queries with use database Name and the individual query.
5. PowerPoint document should be named Group Number – Group Project 1pptx
    a. Demonstrate the effectiveness of meetings with an agenda and attendance
    b. Show the to-do list
    c. Show the project plan
6. Create a voice annotated PowerPoint document should be named Group Number – Group Project 1.mp4
7. Create a voice video of the JDBC execution of the group's three top queries from simple, medium and complex execution. Nine queries in all, it should be named Group Number – JDBC Project 1.mp4
